

Modulating rotary actuator with emergency control function for ball valves

- Nominal torque 2.5 Nm
- Nominal voltage AC/DC 24 V
- Control Modulating DC (0)2...10 V
- · Position feedback DC 2...10 V
- Deenergised closed (NC)

- This device has been designed for use in stationary heating, ventilation and air conditioning systems and is not allowed to be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied during installation.
- The device may only be opened at the manufacturer's site. It does not contain any parts that can be replaced or repaired by the user.
- · Cables must not be removed from the device.

## Safety notes

 The device contains electrical and electronic components and is not allowed to be disposed of as household refuse. All locally valid regulations and requirements must be observed.

### **Product features**

Principle of operation T

The actuator is connected with a standard modulating signal DC 0...10 V. The actuator moves the valve to the operating position at the same time as tensioning the return spring. The valve is turned back to the emergency position by spring force when the supply voltage is interrupted.

Simple direct mounting

Simple direct mounting on the ball valve with only one screw. The mounting orientation in relation to the ball valve can be selected in  $90^{\circ}$  steps.

High functional reliability

The actuator is overload protected, requires no limit switches and automatically stops when the end stop is reached.

#### **Electrical installation**

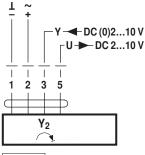

#### **Notes**

- · Connection via safety isolating transformer.
- Parallel connection of other actuators possible. Observe the performance data.
